

SRIKANTH B S

Full Stack Software Engineer | AI & LLM Automation Architect | Engineering Leader

srikanth974213@gmail.com · +91 79756 37082 · Shimoga, Karnataka, India
linkedin.com/in/srikanth-b-s-a9a567151 · github.com/SRI421 · Portfolio: sri421.github.io/srikanthbs

PROFESSIONAL SUMMARY

Award-winning Full Stack Software Engineer with 6+ years architecting and deploying production-grade AI-driven platforms. Recently shipped two end-to-end **LLM automation products**: an **intent-analysis engine** that converts e-commerce customer-support conversations into reusable service playbooks (triggers, templates, decision trees), and a **self-updating RAG knowledge wiki** with grounded Q&A over company documents. Deep expertise spanning LLM integration, durable workflow orchestration, semantic search, cloud-native architecture, and React front-ends. Seeking Senior Software Engineer / AI Engineer / Backend Engineer roles focused on architecture, mentorship, and technical leadership.

Core Competencies: LLM Automation & Generative AI, RAG Pipelines, Intent Classification, Workflow Orchestration (Temporal), Semantic Search (pgvector), Microservices & System Design, Cloud Architecture (Azure/AWS), Full Stack Development (Python, React), Technical Leadership

Key Metrics: 14+ complex projects from ideation to production · 2 LLM automation platforms shipped end-to-end · \$2M+ revenue impact via automation · Up to 45% performance gains · 10+ engineers mentored

PROFESSIONAL EXPERIENCE

Project Lead & Senior Software Engineer — Perfecter.ai

May 2024 – Present | Remote

AI-powered automation platform

Flagship: Intent Analysis Automation — customer-support intelligence for e-commerce

- Architected an end-to-end platform that ingests **incoming & outgoing support-ticket messages** and classifies each for **intent and response type** using vector embeddings + **Gemini 3.1 Pro** LLM calls.
- Designed the analysis layer that auto-generates a reusable **service playbook** — **triggers** (when to act), **response templates** (what to send), and **decision trees** (which process path per intent × response type) — versioned in PostgreSQL as a reference for any customer-service team.
- Orchestrated ingest → normalize → embed → classify → aggregate as **durable Temporal workflows** (automatic retries, fault-tolerance, replayable history); built the **React analytics dashboard** — intent explorer, template library, decision-tree viewer.

Tech: Python · PostgreSQL · Temporal · Embeddings · Gemini 3.1 Pro · ReactJS

Flagship: Knowledge Wiki + Ask Wiki — docs-to-wiki automation with RAG

- Built a **multi-tenant knowledge platform**: companies connect their drive via **company OAuth logins** and grant a folder; a change tracker automatically syncs document **additions, updates, and deletions**.
- Engineered **Temporal document pipelines** (parse → chunk → embed → generate) that turn every document into a **Wikipedia-style page** — side menus, sections, cross-links — stored in **PostgreSQL + pgvector**.
- Delivered **"Ask Wiki"**: an on-time RAG assistant for support staff — pgvector semantic retrieval + Gemini 3.1 Pro answers grounded strictly in the company's wiki docs, with source citations.

Tech: Python · PostgreSQL + pgvector · Temporal · Embeddings · Gemini 3.1 Pro · OAuth · ReactJS

Leadership & Architecture

- Led an 8+ member engineering team building AI-powered web platforms, setting technical vision and enforcing architectural standards.
- Architected microservices-based systems using Flask + FastAPI and React TypeScript, enabling horizontal scaling to 10,000+ concurrent users.
- Implemented CI/CD pipelines with Azure DevOps, reducing deployment time from 45 minutes to 8 minutes (82% improvement); introduced coding standards and review practices, cutting production defects by 40% and raising automated test coverage to 87%.

Technical Delivery & Impact

- Designed AI/OCR/NLP document pipelines using GPT-4, Claude APIs, and OpenAI Vision, achieving 94.7% extraction accuracy versus ~78% baseline.
- Migrated monolith to serverless architecture (Azure Functions, Cosmos DB), lowering infrastructure costs by 60% while achieving 99.99% availability.
- Built event-driven analytics with Event Hub and Stream Analytics, processing 50,000+ events/second with sub-second latency.
- Optimized APIs via Redis caching and database indexing, cutting average response time from 2.8s to 340ms (87% improvement).
- Delivered an AI-driven subrogation platform reducing claim processing from 4 hours to 15 minutes per claim, with automated audit-ready reporting.

Tech: Python 3.11+ · Flask · FastAPI · React 18 (TypeScript) · PostgreSQL · Temporal · Azure (Functions, Cosmos DB, Event Hub, DevOps) · Docker · Kubernetes · Redis · LLMs (Gemini, GPT-4, Claude)

Full Stack Developer & Systems Engineer — Gridlogic

Dec 2022 – May 2024 | Remote

FinTech / payment infrastructure

- Designed distributed services for KYC, payments and analytics used by 500+ institutional clients.
- Improved backend throughput by 3.5x using optimized SQL, async processing, RabbitMQ and Celery, while reducing server costs by 45%.
- Refactored core systems into microservices; built a payment reconciliation engine processing 100,000+ transactions/day with strict ACID guarantees.

- Implemented Redis caching that reduced DB load by 65% and improved API latency by 58%; created data-migration pipelines moving 5TB+ with zero downtime.

Tech: Python 3.9+ · Django 4+ · FastAPI · RabbitMQ · Redis · PostgreSQL · SQL optimization · Docker · AWS

Product Developer Associate — Benchmark ESG | Gensuite

Mar 2022 – Dec 2022

Enterprise compliance & sustainability reporting SaaS

- Delivered 15+ full-stack features for compliance dashboards supporting a \$2M+ annual revenue pipeline.
- Optimized React frontends with lazy loading and code splitting — bundle size down 52%, load time from 4.2s to 1.8s; built real-time dashboards rendering 100,000+ data points at 60 FPS.
- Automated ESG data-ingestion pipelines using AWS Lambda and S3.

Tech: Python · React.js · AWS (Lambda, S3, CloudWatch) · SQL · ColdFusion · HTML/CSS/JavaScript

Associate Software Engineer — ACT Fibernet

Aug 2021 – Mar 2022

Telecom infrastructure

- Developed internal enterprise tools on the MEAN stack supporting 2,000+ employees; automation reduced manual operational effort by ~40%.

Tech: MongoDB · Express.js · Angular · Node.js

Freelance Full Stack Web Developer

Sep 2019 – Aug 2021

Independent consultant

- Delivered 20+ production web applications for startups and SMBs generating \$50,000+ in billed work, with 98%+ client satisfaction; mentored 3 junior developers.

Tech: Python · React.js · Node.js · PostgreSQL · MongoDB · AWS

IMPACTFUL PROJECTS & ACHIEVEMENTS

LLM Automation Platforms

- **Intent Analysis Automation:** turns e-commerce support-ticket conversations into a reusable playbook of intents, triggers, templates and decision trees — embeddings + Gemini 3.1 Pro on durable Temporal pipelines, with a React analytics dashboard.
- **Knowledge Wiki + Ask Wiki:** OAuth-connected drive folders auto-published as a Wikipedia-style wiki (add/update/delete sync) with a pgvector + LLM RAG assistant answering support questions with citations.

AI & Analytics

- **Malpractice Detection System:** real-time exam proctoring with face verification and head-pose tracking — ~98% accuracy, deployed for 100,000+ students.
- **SmartEval App:** automated handwritten answer evaluation using deep learning — 500,000+ scripts processed, 10,000+ grading hours saved; published research paper.
- **Intelligent Surveillance:** vision-based person recognition — ~99.2% accuracy across 50+ secure facilities.
- **Realtime Pothole Detection:** computer vision + GPS mapping with automated alerts integrated into municipal workflows.

Architecture & Infrastructure

- **Enterprise Dashboard Platform:** cloud-based payment and analytics suite — 99.9% uptime, 10,000+ concurrent users.
- **Document Processing Pipeline:** insurance-focused intelligent extraction — 94.7% accuracy, 50,000+ documents/month.
- **Microservices Migration:** monolith → containerized microservices — deployment time down 70%, throughput tripled.

Awards & Recognition

- Best Project (2020–21), university-level competition · Certificate of Excellence, B.E. CS (Ramaiah Institute of Technology) · Topper Medal, D S Dinakar National Polytechnic · Peer-reviewed research paper on SmartEval (AI/NLP).

TECHNICAL SKILLS

AI / LLM & Data: LLM integrations (Gemini 3.1 Pro, GPT-4, Claude), Generative AI, RAG pipelines, Embeddings & semantic search (pgvector), Prompt engineering, Temporal workflow orchestration, Machine Learning (TensorFlow, PyTorch, Scikit-learn), NLP, Computer Vision (OpenCV, YOLO)

Languages & Frameworks: Python 3.11+, JavaScript, TypeScript, React 18+ (Hooks, Context, Redux), Node.js, Flask, FastAPI, Django 4+, Java, C++, HTML5, CSS3, Responsive UI

Cloud & DevOps: Azure (Functions, Cosmos DB, Event Hub, App Service, DevOps), AWS (Lambda, S3, EC2, RDS, CloudWatch), Docker, Kubernetes, CI/CD (GitHub Actions, Azure DevOps), Terraform, Microservices, Serverless, IaC

Databases & Messaging: PostgreSQL (indexing, query tuning, window functions), pgvector, MongoDB, Redis, RabbitMQ, Cosmos DB, Advanced SQL

Leadership: Architectural decision-making, Technical mentorship, Cross-functional leadership, Agile/Scrum, Stakeholder communication, Code reviews, Technical documentation

CERTIFICATIONS & PUBLICATIONS

- NPTEL – Python DSA (Top 10%) · Microfocus – Docker & Containers (Advanced) · Udemy – MEAN Stack · Certifications in Flask, Django, ReactJS, MongoDB, Java, SQL · SmartEval AI/NLP research paper — peer-reviewed publication.

EDUCATION

B.E. — Computer Science, Ramaiah Institute of Technology · CGPA 7.82 (Distinction)

2018 – 2021

Diploma — Computer Science, D S Dinakar National Polytechnic · 90.30% (Topper Medal)

2015 – 2018

SSLC — Poornaprajna Education Centre · 85.12%

2015

Professional Interests: LLM agents & automation · Distributed architecture · System design · Technical leadership · Open-source · Chess
